# Cloud Security Management for Oracle Fusion

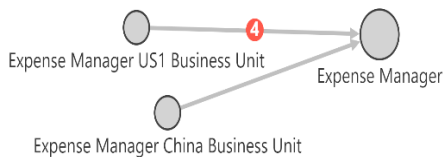

## About secure<sup>+</sup>

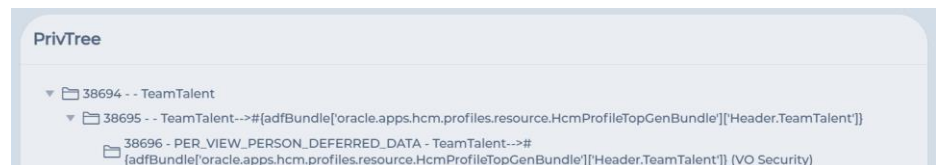

### KEY BENEFITS

- Enterprise wide
- SaaS Priced
- Role Based Security Management
- Cloud Fusion ERP
- Easy to Use
- Snap Shots

<b>For</b>	Fusion ERP Application Subscribers
<b>Who</b>	Role Security Analysts System Administrators Project Implementation Specialists System Auditors
<b>Require</b>	Easy to Use Security Administration and monitoring Insights into Subscription Costs Clarity on who can do what on ERP systems
<b>The</b>	Cloud SaaS model secure+ Application
<b>That</b>	Has the benefit of close integration with Fusion releases, providing snapshots, comparisons, user and privilege views and analysis by application role
<b>Unlike</b>	A user-friendly alternative to the standard Security Console
<b>Our Product</b>	Provides insights and facilities to easily design, analyse, track and monitor the ERP security model for Oracle Fusion Cloud.

Allows users to connect to easily visualise and administrate Subscription relevant Role Based Security models at a point in time.

## KEY FEATURES

- Designed by Implementors and Security specialists
- Visualisations of hierarchies
- UpToDate with security patches as Fusion releases
- Export to Excel

Reporting on what privileges the roles are composed of and how that can impact Subscription utilisation is far easier to do with Secure+.

Monitor and track user assignments to roles and their utilisation profiles can help design more cost effective business processes and facilitate the assignment of roles to users in an optimal way.

SnapShot roles & privileges with their user assignments for an ERP instance. Allowing difference instance comparison(Test & Prod) or change difference between snapshots for a single instance

Allow for detailed analysis, breakdown of user & role assignment by an individual Oracle SKU or SKU role(group of SKU's). Defined with using the "Predefined Roles & Subscription Impact" monthly spreadsheet supplied by Oracle.

Built on the Oracle Apex platform it has a coherent and feature rich UI. All secured under the Apex Security model, supplemented with 2 factor authentications.

Incorporating a Security browser offers the user to describe the roles to verify constituents' names and easily link to the Oracle source documentation at the click of a button for the selected role.

## Value Proposition

- Save on Subscription costs through optimizing Role's allocation.
- Manage and understand your security model.
- Compare models over time to facilitate Audits.
- Design and compose Roles with Privileges to suit your organization.
